

## Crushproof Garage Door Ports

Date 7/12

Part No. DF25, ADFXX

Crushproof Accessories

Tab 21-F

Garage Door Ports are used to create a pass-through in a garage door where exhaust hose can exit. Using a garage door port prevents kinking in the hose and reduces the loss of tempered air in the shop. They are available in Rubber and Aluminum. Please check that your hose size and door hole opening size are correct for your application. Sizing information shown below including garage door hole size and compatible hose sizes.

### Door Port Options

Model #	Hose Size	Description	Ring O.D.	Ring I.D.	Door Hole Dia.
